

Individual Income Tax Returns

Preliminary Income, Deduction, and Residential Energy Credit Statistics for 1979

By Noreen Hoffmeier*

Preliminary statistics for Income Year 1979 show a 3.2 percent increase in the number of individual income tax returns filed, to 92.6 million (see Figure A). This was 2.8 million more returns than were filed for 1978--in spite of law changes raising the minimum income levels required for filing a tax return.

Adjusted gross income reached almost \$1.5 trillion for 1979, a 12.4 percent increase over 1978. Salaries, which typically make up more than 80 percent of

adjusted gross income, increased at about the same rate (12.8 percent). Some types of investment income, however, showed even more rapid changes--

Income type	1979 amount (millions)	Change from 1978
Interest	\$73,218	19.6%
Estate or trust..	3,644	18.3
Royalty	3,018	17.9

Figure A.—Sources of Income and Selected Tax Items, 1978 and 1979

[All figures are estimates based on samples--money amounts are in thousands of dollars]

Total tax liability.....	193,184,849	219,244,082	26,059,233

¹Consists of State income tax refunds, alimony received, unemployment compensation in adjusted gross income, and other income less loss.

NOTE: Detail may not add to total because of rounding.

Income growth was one of the major factors that contributed to the substantial overall increase in total income tax--up 13.6 percent, from \$188.2 billion for 1978 to \$213.8 billion for 1979. The average income tax, however, increased at a slower rate (about 9 percent), going from \$2,740 to \$2,986. Income tax as a percent of adjusted gross income remained about the same, 15.2 percent for 1978 and 15.3 percent for 1979.

TAX LAW REVISIONS

The tax return data presented here reflect not only economic conditions, but also the results of tax law changes that went into effect for 1979. Major changes for 1979 tax returns, which were chiefly the result of the Revenue Act of 1978, covered income, exemptions, deductions, credits, and tax. Highlights of these changes are listed below.

Filing Requirements Change.--In general, the basic criterion for filing a tax return was the amount of income received; an income cutoff for filing purposes was determined by adding together the personal exemption amount and the zero bracket amount (ZBA). For 1979, the personal exemption amount was set at \$1,000, compared to the \$750 amount in effect from 1972 to 1978. The ZBA, based on marital status, was also increased--

Marital status	1978 ZBA	1979 ZBA
Married, filing jointly; surviving spouses	\$3,200	\$3,400
Married, filing separately	1,600	1,700
Single; head of household	2,200	2,300

These changes combined to raise the basic income filing requirements for joint returns by \$700, for returns of surviving spouses by \$450, and for all other returns by \$350. (For taxpayers age 65 or over, the limit was also increased by an additional \$250 because of the extra age exemption allowed.) Partly as a result of these changes, there was an overall 6 percent decline in returns showing incomes under \$5,000, with the specific changes as follows:

Marital status	Returns under \$5,000 (thousands)	Decrease from 1978
Married, filing jointly; surviving spouses	2,596	12.4%
Married, filing separately	521	19.8
Single; head of household	17,737	4.8

Unemployment Compensation Taxed.--Unemployment compensation paid under Government programs was subject to taxation for the first time in 1979. In general, for every dollar of total income (including the unemployment compensation) in excess of \$20,000 for single taxpayers and \$25,000 for married taxpayers filing jointly, \$.50 of the unemployment compensation was brought into gross income. For married taxpayers who filed separate returns, all unemployment compensation had to be considered. According to the U.S. Employment and Training Administration, Department of Labor, a total of \$9.4 billion in unemployment compensation benefits was paid out for 1979 through Government programs.

There were more than 6 million returns filed with \$7.1 billion in total unemployment compensation; of these, slightly more than 1 million returns showed almost \$1.0 billion of unemployment compensation included in adjusted gross income and subject to tax.

Changes in Itemized Deductions.--Two types of deductions were no longer available for 1979: the deduction for nonbusiness State and local gasoline taxes and the deduction for political contributions. These two changes, and particularly the increased zero bracket amount, no doubt contributed to the relatively small (2.8 percent) increase in the number of returns with itemized deductions, from 25.8 million returns for 1978 to 26.5 million for 1979. The amount of itemized deductions, however, increased by 11.2 percent over 1978. The following changes in each category of itemized deductions show the size of the increase.

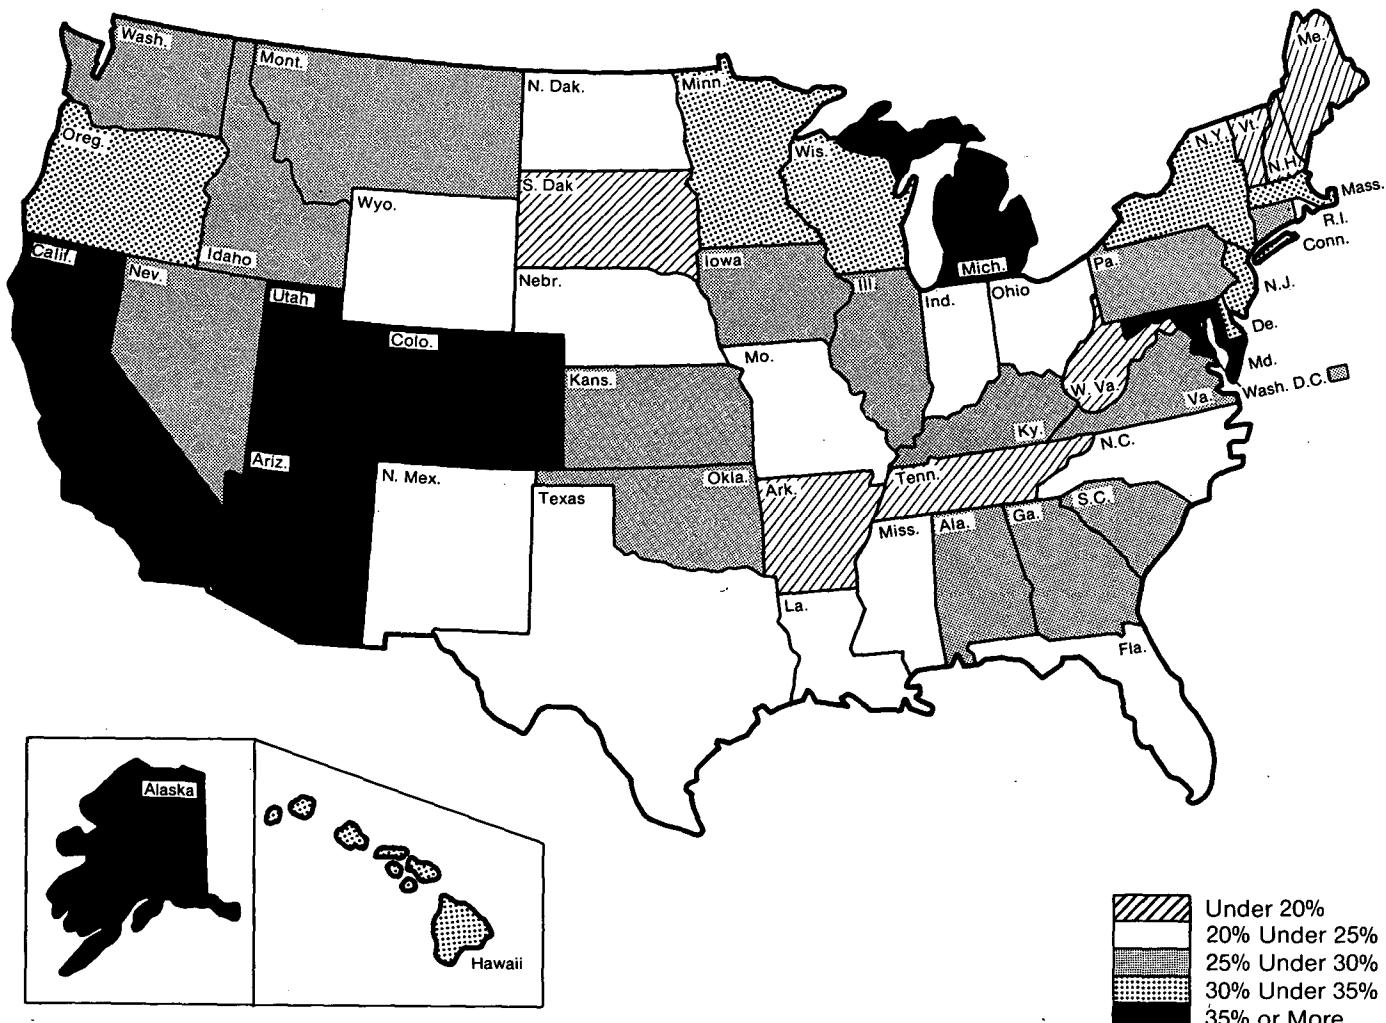

Deduction type	1979 amount (millions)	Change from 1978
Interest paid ...	\$73,620	21.3%
Contributions ...	22,127	12.4
Medical	12,843	5.2
Taxes	60,553	1.8
All Other	13,767	11.5

The proportion of returns with itemized deductions for 1979 by State is illustrated in Figure 8. The distribution ranged from a low of 13.9 percent for West Virginia to a high of 39.9 percent for Utah.

Earned Income Credit Revised.--Originally instituted for 1975, the earned income credit was designed in part to encourage employment by being tied to an individual's earned income. From 1975 to 1978, this refundable credit of up to \$400 was available, in general, to taxpayers with incomes under \$8,000 and with dependent children. For 1979, taxpayers with incomes of up to \$10,000 could receive as much as \$500 of earned income credit. Not surprisingly, the number of returns with an earned income credit rose from 5.2 million for 1978 to 7.2 million for 1979. Much of this increase can be attributed to the raised income limits, which allowed 1.9 million taxpayers with incomes between \$8,000 and \$10,000 to claim the credit for 1979.

General Tax Credit Not Renewed.--The general tax credit, available for 1975-1978, was discontinued beginning with 1979, since it had been compensated for by the increase in the personal exemption amount and reduction (and other changes) in the tax rates. Most of the \$10.5 billion decline in total tax credits from 1978 to 1979 was a result of the elimination of the general tax credit, which accounted for more than \$10.2 billion of the total \$17.1 billion in credits claimed for 1978.

Residential Energy Credit Carryover Begins.--While the residential energy credit first came into being for 1978, not all aspects of the credit took effect with that year. Written into the law was a provision which allowed taxpayers with more credits than tax to carry any excess residential energy credit forward to be used against the next year's tax. (The credit was scheduled to be in effect for Tax Years 1978 through 1985, although any carryover from that period could be used through 1987.) For 1979, slightly more than 100,000 returns indicated a carryover from 1978, and 193,000 indicated a carryover to 1980. Overall, the number of returns with a residential energy credit declined about 1 million, from 5.8 million for 1978 to 4.8 million for 1979. This may be due in part to the fact that the credit for 1978 covered expenses incurred in 1977 and 1978, while the 1979 credit re-

Figure B**Returns with Total Itemized Deductions as a Percent of All Returns, By State, 1979**

flects only that year's expenses. Also, since the credit was figured on a per "residence" (rather than per "taxpayer") basis, those taxpayers who made use of the maximum amount of the credit for 1978 and did not change residences were not eligible for a credit for 1979.

Alternative Minimum Tax Created.--For Tax Year 1979, taxpayers with high incomes who may have otherwise paid little or no tax (due to large deductions, credits, or capital gain exclusions) became subject to a new "alternative minimum tax." This tax was computed, in general, by adding to taxable income any excluded long-term capital gains plus "excess" itemized deductions (those exceeding 60 percent of adjusted gross income), subtracting \$20,000, and subjecting the remainder to a graduated tax ranging from 10 to 25 percent. The alternative minimum tax was then reduced by other income taxes. In effect, the taxpayer had to pay the greater of the tax computed under the normal tax computation methods or the alternative minimum method.

For tax years before 1979, excess itemized deductions and excluded capital gains had been combined with other "tax preferences" and, after certain exclusions, subjected to a flat 15 percent tax. This "minimum tax" computation remained in effect for other tax preferences in 1979. The minimum tax and the alternative minimum tax, taken together, are shown as the "additional tax for tax preferences" in the tables.

Other Changes.--New tax rate schedules were provided for, generally by widening the income brackets. This resulted in 15 tax brackets instead of 25 for joint returns; and 16 instead of 25 for single returns. There was also a reduction in most of the lower tax rates and in some of the higher rates, with the average reduction being 7 percent.

The "alternative" tax on capital gains was repealed, in part because of other changes in the treatment of capital gains. For 1979, only 40 percent of long-term capital gains had to be included in adjusted gross income, in contrast to previous years

when 50 percent was included. (The 40 percent rate actually went into effect for the last two months of 1978, even though the alternative tax computation method was then still available.) Despite these changes, the net includable amount from sales of capital assets increased by 15.4 percent, from \$23.2 billion for 1978 to \$26.8 billion for 1979.

Basic Table Information

There are five basic tables covering individual income tax return data for 1979. Table 1 provides cumulated data on number of returns filed, adjusted gross income, and total income tax, classified by size of adjusted gross income. Table 2 provides data for all returns on the major sources of income, adjustments, credits, and other tax items, classified

by size of adjusted gross income. Information on itemized deductions, also classified by size of adjusted gross income, is shown in table 3. The computation of the residential energy credit, including types of expenditures, is detailed in table 4. Finally, table 5 covers the basic income and tax information for each State.

Following these tables is a brief statement on the sample used to compile the statistics presented here, as well as some of the limitations arising from both sampling and nonsampling errors.

Additional detailed statistics, as well as definitions of terms and a comprehensive description of the data limitations, will be available in the complete report, Statistics of Income--1979, Individual Income Tax Returns.

*Estimate should be used with caution because of the small number of sample returns on which it is based.

**Data combined to avoid disclosure of information for specific taxpayers.

¹Consists of amounts used to offset "minimum tax" for 1979 and amounts carried over to 1980.

NOTE: Detail may not add to total because of rounding.

Table 5.—Selected Sources of Income and Tax Items, by State

(All figures are estimates based on samples—money amounts are in thousands of dollars)

^aEstimate should be used with caution because of the small number of sample returns on which it is based.^bData deleted to avoid disclosure of information for specific taxpayers. Deleted data are included in the appropriate totals.^cReturns filed from Army Post Office and Fleet Post Office addresses.^dReturns filed by U.S. citizens living in U.S. possessions or abroad.

NOTE: Detail may not add to total because of rounding.

DATA SOURCES AND LIMITATIONS

These statistics were based on a sample of unaudited individual income tax returns, Forms 1040 and 1040A. The sample was stratified based on the presence or absence of a Schedule C, State from which filed, adjusted gross income or largest source of income, and business plus farm receipts. The 1979 returns were selected at rates ranging from 0.05 percent to 100 percent. There were 187,262 returns in the 1979 sample estimating a total population of 92,616,213. The corresponding counts for 1978 were 157,792 and 89,771,551.

Because the estimates are based on a sample, they are subject to sampling error. The return data are also subject to nonsampling error due to taxpayer reporting variations and to discrepancies introduced during statistical processing.

Coefficient of Variation

The upper limits of the coefficient of variation shown in Figure C for 1979 (for frequency estimates only) are intended as a general indication of the reliability of the data.

Additional measures of the coefficient of variation for the various data items will be presented separately in the forthcoming Statistics of Income report for 1979 which will contain tabulations for that year. The computed coefficients of variation of estimates already published in the 1978 Statistics of Income report can be used to approximate the reliability of similar 1979 estimates.

Nonsampling Error

Nonsampling error was controlled during statistical processing by a variety of methods. Among them was a systematic verification at field processing locations of the manual data editing. As a further check on the quality of the editing, small subsamples selected after field verification were reprocessed in the National Office. Key entry of the data at the processing locations was subjected to 100 percent verification.

Prior to tabulation, numerous computer tests were applied to each return record to check on inconsistencies. Lastly, prior to publication all statistics and tables were reviewed for accuracy and reason-

ableness in light of provisions of the tax laws, taxpayer reporting variations and limitations, economic conditions, and comparability with other statistical series.

Definitions and Law Changes

In general, the definitions of the terms used here are the same as those shown in the complete report, Statistics of Income--1978, Individual Income Tax Returns. However, the statistics shown for 1979 were affected by tax law changes provided for by the Revenue Act of 1978. Those changes having the most substantial effect on the data are outlined below. Specifically, the Revenue Act of 1978:

(1) Widened the income brackets in the tax rate schedules and reduced tax rates in certain brackets;

(2) Increased the personal exemption amount from \$750 to \$1,000, and allowed the general tax credit to expire at the end of 1978;

(3) Increased the zero bracket amount from \$3,200 to \$3,400 for joint returns (and returns of surviving spouses), from \$1,600 to \$1,700 for married persons filing separately, and from \$2,200 to \$2,300 for single returns and returns of heads of households;

(4) As a result of (2) and (3), raised the income filing requirements for joint returns by \$700, for returns of surviving spouses by \$450, and for all other returns by \$350 (and by an additional \$250 for taxpayers age 65 or over);

(5) Made extensive revisions to the earned income credit, which included increasing both the maximum amount of the credit from \$400 to \$500 and the maximum amount of earned income subject to the credit from \$8,000 to \$10,000, and providing for an advance payment of the credit throughout the year;

(6) Repealed the nonbusiness itemized deduction for State and local gasoline taxes;

(7) Made all or a portion of unemployment compensation received subject to taxation;

(8) Repealed the alternative tax on capital gains;

(9) Provided for an alternative minimum tax, based on an individual's taxable income, excess itemized deductions, and excluded capital gains; and

(10) Repealed the nonbusiness itemized deduction for political contributions, but increased the corresponding credit allowed from \$25 to \$50 (from \$50 to \$100 on joint returns).

Figure C.--Estimated Number of Returns for Selected Estimates of the Coefficient of Variation by Size of Adjusted Gross Income/Deficit, 1979

[Cells are estimated number of returns]

Coefficient of variation (C.V.) (Percent)	Size of adjusted gross income/deficit								
	Under \$10,000 ¹	\$10,000 under \$15,000	\$15,000 under \$20,000	\$20,000 under \$30,000	\$30,000 under \$50,000	\$50,000 under \$100,000	\$100,000 under \$200,000	\$200,000 under \$500,000	\$500,000 and over
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
2.....	5,277,300	3,810,400	3,304,200	2,881,600	1,718,000	448,600	98,400	23,800	700
5.....	844,400	609,700	528,700	461,000	274,900	71,800	15,700	3,800	100
10.....	211,100	152,400	132,200	115,300	68,700	17,900	3,900	1,000	30
20.....	52,800	38,100	33,000	28,800	17,200	4,500	1,000	200	7
30.....	23,500	16,900	14,700	12,800	7,600	2,000	400	100	3
35.....	17,200	12,400	10,800	9,400	5,600	1,500	300	80	2
50 ²	8,400	6,100	5,300	4,600	2,700	700	200	40	1

¹This column should be used for estimated numbers of returns not classified by adjusted gross income/deficit.

²Estimates with C.V.'s of 50 percent have standard deviations which are about one-half as large as the estimates themselves.
